EDUCATION

Grambling State University

Expected May 2028

Bachelor of Science in Computer Science, 3.95/4.0 GPA

- Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management, Operating Systems, Computer Networks, Cloud Computing

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, C++, SQL

Frameworks: React, Node.js, Spring Boot

Tools & Cloud: Git, Docker, Kubernetes, AWS, Jenkins

Databases: PostgreSQL, MySQL, MongoDB

EXPERIENCE

Google, Software Engineer Fellow

Aug 2026 – Present

- Develop a Python/TensorFlow classification model to flag anomalous records in historical operational data, cutting data-processing time by **35%**
- Build an automated testing framework for a Python data-processing platform, integrating unit and regression tests into CI and reducing bug occurrence by **40%** across a five-engineer team
- Redesign the React interface for an internal batch-monitoring tool used by 40+ engineers, simplifying job-status workflows and raising user-experience survey scores by **50%**
- Optimize 20+ PostgreSQL queries behind the batch-monitoring tool by adding indexes and restructuring high-cost joins, cutting p95 query latency by **25%**

HeadStarter AI, Software Engineer Fellow

Jul 2026 – Oct 2026

- Developed a Java-based AWS resource-allocation tool automating EC2 and S3 provisioning, saving roughly **10 hours** of manual work per month
- Implemented AES-256 encryption for data at rest and integrated AWS KMS for managed key storage, cutting high-severity findings by **25%** in follow-up vulnerability assessments
- Reviewed 150+ Java and cloud-automation pull requests for correctness, security, and maintainability, cutting average review turnaround time by **30%**

Bloomberg, Tech Lab Fellow

Oct 2025 – Dec 2025

- Designed and deployed Spring Boot microservices on Kubernetes, enabling independent scaling of high-traffic services and raising supported request throughput by **35%** in load tests
- Integrated Bloomberg's real-time market-data API (BLPAPI) to stream live prices and historical data for 10+ financial instruments, powering live portfolio monitoring
- Analyzed PostgreSQL execution plans and optimized indexes and high-cost joins, cutting p95 database latency by **30%** for the market-data service
- Built Jenkins/Docker/Kubernetes CI/CD pipelines for automated testing, image publishing, and rolling deployments, cutting manual release effort by **40%**

Grambling State University, IT Assistant

Sep 2024 – Apr 2025

- Deployed software updates and security patches across 500+ computers in 60+ campus buildings, achieving **100%** update completion with zero reported disruptions
- Configured and maintained switches, wireless access points, and network connections across 60+ campus buildings, sustaining **95%** network uptime campus-wide
- Built and maintained an Excel-based inventory system tracking 500+ IT assets across 60+ campus buildings, cutting average asset lookup time by **40%** and speeding up audits

PROJECTS

Stock Price Prediction (AI4ALL) | *Python, FinBERT, Scikit-learn*

- Built an end-to-end financial NLP pipeline processing 322K headlines and 20M stock records, using FinBERT sentiment analysis for stock-movement classification
- Engineered a novel Competitive Pressure Index capturing negative-news surges relative to each stock's baseline coverage, used as the core feature for downstream classification
- Trained a Random Forest classifier via 5-fold cross-validation, achieving **54%** accuracy and outperforming a Logistic Regression baseline

CITIES Dashboard | *React, Material UI, Google Charts, GitHub Actions*

- Built the front-end of a dashboard delivering air-quality insights to 20K+ students across Monroe, Louisiana schools
- Automated deployment with GitHub Actions, replacing manual build-and-release steps with a single pipeline and cutting release time by roughly **30%**

LEADERSHIP & PROFESSIONAL DEVELOPMENT

ColorStack Grambling Academic Chair

Aug 2026 – Present

Grambling State University

- Lead weekly LeetCode workshops for 90+ members on data structures and algorithms, helping **15+ members** land software engineering internships

Open Source: 20+ merged PRs across Apache Kafka, pgjdbc, kubernetes-client/java, and facebook/react

Other Activities: JPMorgan Data for Good Hackathon (Apr 2026); NSBE Treasurer; Lantern Network Ambassador
